Apache Maven

Beginner to Guru

Assignment - add JBoss Repository to Settings.xml

Assignment

- **Scenario**: You are doing more and more JBoss development and commonly need JBoss repository in your Maven projects.
- **Solution**: Define JBoss repository in your settings.xml and remove from projects.
  - Create a profile called 'jboss', define repository under profile
  - Add profile 'jboss' to active profiles
- **Verification**: Verify it is working properly by deleting JBoss dependencies from your local Maven Repository and confirming they are re-downloaded from the JBoss repository
