Apache Maven

Beginner to Guru

Overview of Using Oracle Maven Repository

Oracle Maven Repository

- Oracle hosts a Maven repository for Oracle related artifacts

- The Oracle Maven repository requires authentication

- This will be used as an example of how to configure server authentication

  - Steps can be applied to other 3rd party servers requiring authentication

- To follow, you will need an Oracle account

  - Next lecture has registration directions

  - Registration is optional, only needed if you wish to follow configuration steps

Configuration Overview

- Set Maven Master Password

- Encrypt your Oracle account password

- Configure security settings for Oracle in settings.xml

- Maven Wagon - Oracle documentation refers to using Maven Wagon 2.8 or higher

  - Steps are not required with Maven 3.2.5 or higher

  - Course is using Maven 3.6.0
